

A scatter plot showing two classes of data points: cyan circles and magenta circles. The plot includes three parallel green lines representing decision boundaries, labeled with the values -1.000, 0.000, and 1.000. The cyan points are generally located to the left of the 0.000 line, while the magenta points are generally to the right. There is significant overlap between the two classes across all three decision boundaries.
